Setup Review

WHY CONDUCT A SETUP REVIEW?

A Setup Review ensures your compliance streams are correctly configured and optimised for better performance within True Compliance. It also helps identify potential improvements or new features to enhance operations.

HOW IT WORKS

The TC Plus team will conduct a detailed review of the agreed compliance streams, covering:

- Document Mapping
- Queries
- Automations
- Flags
- Widgets
- Notifications
- Reports
- Current Certificate Data Quality

WHAT'S INCLUDED?

At the end of the review, we provide tailored recommendations per compliance stream—ranging from minor refinements to a full re-onboarding process. This review helps customers build confidence in True Compliance and maximize its compliance tracking functions.

WHO CAN BENEFIT?

This service is designed for long-term customers looking to enhance or update their compliance setup, as well as new teams taking over compliance management within an organisation.
